

# A Career Beyond Engineering

Engineering Alumni Singapore (EAS) Career Development Series

Engineering

Other Career Options

When

- 20<sup>th</sup> November 2014,  
7.30 PM

Where

- Training Room 9, SHRI  
• 2 Serangoon Road, Level 6  
The Verge (S)21822

How

- \$15 for EAS Members ([click here](#))
- \$25 for Partners ([click here](#))
- \$40 for Others ([click here](#))

\* Fees are inclusive of Dinner

Join EAS today for only \$200 for a lifetime membership (only for engineering graduates).

To sign up [click here](#) or to find out more about EAS please visit our website at [www.easingapore.org](http://www.easingapore.org)

An engineering degree has traditionally been viewed as one that offers job stability with good career prospects. While that remains true in most cases, the massive downsizing of the hard disk and semiconductor industries show that engineers must remain nimble and open to career moves beyond the engineering discipline as the global economy is constantly changing.

This talk aims to highlight not just some of the attributes needed to make a cross industry/cross professional career switch but more importantly, how to remain professionally nimble so that you will always remain in control of your career.

## Speaker

Tong Hsien-Hui graduated in 1998 from NUS with a Bachelor of Engineering (Elect), joining Mobil Oil as an Advertising and Promotions Executive. His career has seen him switch industries and professions in different countries and with companies of various sizes. He is currently a partner in Wassax Ventures, a venture capital firm, which he joined in June after stepping down as CEO of the National University of Singapore Society. He is also the current President of the Engineering Alumni Singapore.
